ADVANCED ALLERGY CONTROL

# HOW TO KEEP YOUR DOG IN A COMFORT ZONE

## ATOPIC DERMATITIS, A LIFELONG CONDITION.

- Like with human allergies, atopic dermatitis (also called atopy) is caused by an allergic reaction to substances in the environment like pollen, dust mites, mold and tobacco smoke.
- Atopy is a lifelong, chronic disease that can be controlled but not "cured," much like eczema in people.

## SAFE, LONG-TERM CONTROL.

- ATOPICA® (Cyclosporine capsules, USP) MODIFIED is the first nonsteroidal oral medication approved by the FDA specifically to control atopic dermatitis in dogs.
- ATOPICA can be used safely for the long-term to keep your dog's allergies under control.
- Your dog can enjoy a normal life once again – free of the constant itching and irritation.

## COMPLIANCE IS CRUCIAL.

- After the initial 30 days of therapy, your dog will probably start to look and act like himself again.
- It may be tempting to stop administering ATOPICA as your dog appears "cured."
- Remember, atopy is a chronic condition that requires long-term control, so stopping therapy can trigger a relapse.
- Please continue on your veterinarian's prescribed dosing of ATOPICA to prevent setbacks.

## HOW TO ADMINISTER.

- Administer the prescribed dosage of ATOPICA once daily for 30 days.
- After this initial phase, your veterinarian will determine if your dog's atopy can be controlled with a tapered dosage.
- ATOPICA should be given at least one hour before or two hours after a meal.
- If a dose is missed, the next dose should be administered (without doubling) as soon as possible, but you should never give more than one dose per day.

## SIDE EFFECTS.

Like with many medications, some pets may experience gastrointestinal side effects for a short period of time while their system adjusts to a new drug. Generally, these side effects pass in a few days without complication. Talk to your veterinarian if you have questions.

As with all drugs, side effects may occur. In a field study, the most common side effects were gastrointestinal signs. Gingival hyperplasia and papillomas may also occur during the initial dosing phase. ATOPICA is not for use in reproducing dogs or dogs with a history of malignant neoplasia.

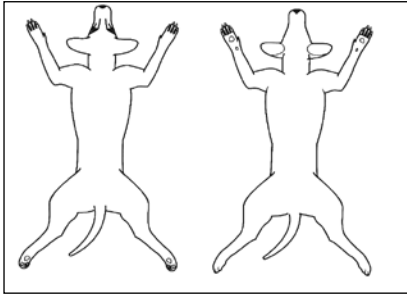

To learn more about atopic dermatitis and ATOPICA, you can find everything you need by visiting [www.us.atopica.com](http://www.us.atopica.com).

# INITIAL EVALUATION

DATE: \_\_\_\_\_

**CIRCLE PROBLEM AREAS**  
(Itching, hair loss, lesions, self trauma, etc.)

**PRESENTING SIGNS: CHECK ANY THAT DESCRIBE YOUR DOG**

- Hair loss
- Foul odor
- Inflammation or redness
- Itching
- Otitis (Ear infections)
- Self trauma
- Licking/chewing
- Other

**PHYSICAL EVALUATION:**

On a scale of 0 to 10 rank the severity of your dog's atopy symptoms.

**SEVERITY OF CONDITION OVERALL**

0    1    2    3    4    5    6    7    8    9    10  
 No symptoms Severe

**SEVERITY OF SKIN LESIONS**

0    1    2    3    4    5    6    7    8    9    10  
 No lesions Severe

**SEVERITY OF SCRATCHING/LICKING/CHEWING**

0    1    2    3    4    5    6    7    8    9    10  
 No signs Severe

**RELATIONSHIP / BEHAVIORAL EVALUATION**

Please indicate how atopic dermatitis has affected your dog's behavior and your relationship with him/her. Circle appropriate answers.

**Sleeps Through the Night**

Always                  Usually                  Occasionally                  Never

**Activity Level**

Inactive                  Much Less Active                  Somewhat Less Active                  No Change

**Social Behavior**

Unsocial                  A Lot Less Social                  Somewhat Less Social                  No Change

**Relationship Changes (circle all that apply)**

- Fewer walks
- No longer sleeps in bed/same room
- Interacts less with family
- Appearance embarrasses me

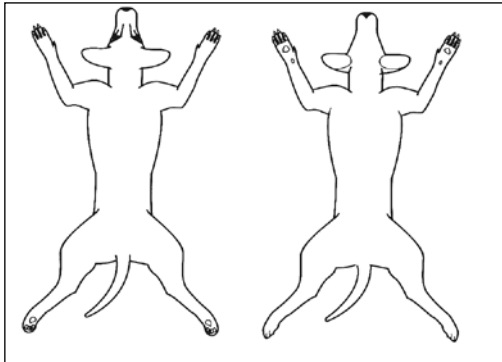

**TREATMENT REGIMEN PRESCRIBED:**

\_\_\_\_\_ ATOPICA® Capsule(s) every \_\_\_\_\_ day(s)  
 (Cyclosporine capsules, USP) MODIFIED

**NEXT APPOINTMENT:** \_\_\_\_\_

# 30-DAY RECHECK
